Professional Summary

AWS & Kubernetes Certified Senior SRE / DevOps Lead with **8+ years** of experience operating large-scale cloud infrastructure across Web3 and enterprise environments. Delivered **~40% cost reduction**, **~57% faster CI/CD pipelines**, and **sub-5-minute incident detection** across multi-region AWS production systems. Specializes in EKS, Terraform, CI/CD automation, disaster recovery, security hardening, and leading SRE teams from system design through live incident response.

Skills

Cloud / AWS: EC2, EKS, RDS/Aurora, ALB, CloudFront, WAF, Route53, IAM, SSM, KMS, CloudWatch, DLM, S3, SNS, VPC

Kubernetes: EKS (private clusters), HPA, Cluster Autoscaler, StatefulSets, PVC/PV, Helm, RBAC, ALB Ingress Controller, Auto Scaling, Microservices

IaC / Automation: Terraform, Ansible, Shell Scripting, Python, Cost Optimization

CI/CD: GitHub Actions, Jenkins, TeamCity, Docker, ECR, Argo CD, Dependabot

OS / Linux: RHEL 7/8/9, CentOS, Ubuntu, Debian, Rocky Linux

Databases: Aurora MySQL, RDS MySQL, PostgreSQL, Redis (RDB+AOF), MySQL binlog replication

Security: WAF (managed rules, rate limiting, custom IP blocking), VAPT, KMS CMK, IRSA, CSP/security headers, IAM least-privilege

Monitoring & Observability: Datadog, Prometheus, Grafana, CloudWatch, ELK Stack (Kibana), Splunk, Dozzle, AIOps

Backup & DR: Veeam, Cohesity, AWS DLM, AMI/EBS snapshots, PVC recovery, Disaster Recovery runbooks

ITSM / Incident Mgmt: Jira, Confluence, ServiceNow, Remedy, Incident Management, RCA, On-Call, SLO/SLI

Work Experience

Senior Site Reliability Engineer / Lead – Token 13 Software L.L.C

Jun 2025 – Present

Dubai, UAE

- **Owned** end-to-end cloud architecture and production operations for a live **Web3 platform** spanning a non-custodial wallet (TokenB), blockchain explorer, and crypto payment gateway across multiple AWS regions, sustaining **99.9%+ uptime** with zero outages attributed to infrastructure design.
- **Executed a full AWS account migration with zero downtime**, migrating all production services from EC2 to EKS by rebuilding VPC, Aurora MySQL, RDS, ECR, IAM/OIDC, and Kubernetes from scratch, completing live Route53 traffic cutover with verified rollback coverage at every stage.
- **Directed 4-hour full-stack recovery** from a UAE datacenter AZ failure, coordinating 3 engineering teams to rebuild VPC, EKS, and jump server from pre-tested IaC templates and execute Route53 DNS cutover at 60-second TTL, restoring complete production traffic with **zero data loss**.
- **Architected private EKS clusters** hosting 15+ production microservices across dev, staging, and production namespaces with ALB Ingress, IRSA, HPA, Cluster Autoscaler, and RBAC, achieving **zero security incidents** by eliminating every public SSH entry point through AWS SSM.
- **Engineered 25+ GitHub Actions CI/CD pipelines** from scratch across 8+ repositories, replacing TeamCity entirely, cutting pipeline runtime by **50% (6 min to 3 min)** through Docker layer caching, Alpine-based images, and parallel job execution, scaling deployment frequency from once weekly to **5+ deployments daily**.
- **Reduced** production recovery time from days to **under 4 hours** by architecting cross-region DR with MySQL binlog replication over VPC peering and a pilot-light EKS standby environment, proven under real conditions during the UAE datacenter AZ failure.
- **Achieved zero outstanding security vulnerabilities** across 4 production domains by remediating all VAPT findings through AWS WAF, IP rate limiting, CloudFront CSP headers, and JumpServer PAM; secured cryptographic operations with KMS CMKs and IRSA key signing.
- **Deployed S3 and CloudFront static infrastructure** for Token13 platforms with private origins, WAF controls, and cache optimization, delivering secure low-latency global content distribution across all Web3 frontend properties.
- **Compressed** mean incident detection from 30 minutes to **under 5 minutes** by deploying Prometheus, Grafana, Loki, and AlertManager with custom scripts monitoring live TRX/USDT wallet balances, triggering proactive Lark alerts before impacting platform liquidity.
- **Cut annual cloud spend by ~40%** while leading a 3-person SRE team, growing the team from task-dependent to **fully autonomous** across all production operations within 6 months.

Bangalore

- **Administered a 7,000+ server fleet** across Lowe's US data centers on RHEL, CentOS, Ubuntu, and Rocky Linux, covering provisioning, OS patching, vulnerability remediation, and performance tuning for physical and virtual servers.
- **Engineered** Jenkins and Ansible CI/CD pipelines that automated ownership updates, upgrades, installs, and vulnerability remediation across **200+ servers**, eliminating **70% of manual operations** and enabling self-service deployments for the engineering team.
- **Diagnosed and resolved** critical server performance bottlenecks including hung processes, CPU/memory spikes, port conflicts, and service failures using Grafana, Splunk, journalctl, and dmesg, **minimizing unplanned downtime** across all data center environments.
- **Managed** Kubernetes workloads including containerised application deployments, cluster troubleshooting, log pipeline management, and configuration of pods, services, PVs, namespaces, Secrets, and ConfigMaps.
- **Maintained** enterprise backup and DR using **Veeam Backup & Replication** and Cohesity, ensuring business continuity and meeting RTO/RPO targets for Lowe's data center operations.
- **Recognised** with **SPOT Award, Focus on Customers Award, and Deliver Results Award** for high-impact delivery across OS support, Python dependency resolution, and OS migration initiatives.

System Engineer - SRE – L & T Technology Services

Apr 2019 – Mar 2021

Bangalore | *Client: Huawei Technologies India Pvt Ltd*

- **Accelerated** deployments by **83%** by implementing Terraform-based Infrastructure as Code for AppGallery application rollouts, reducing deployment time from **180 to 30 minutes**.
- **Improved** platform reliability from **87.5% to 98%+** across AAL and RU regions through targeted service optimisation, proactive fault management, and daily resource utilisation analysis.
- **Operated** SRE for **5,000+ cloud servers** providing 24/7 incident management, monitoring, and maintenance of Huawei Mobile Services (HMS) on Kubernetes, Nuwa, and Tomcat clusters; built an **AIOps dashboard** for business-level success rate and latency monitoring.
- **Awarded Shining Star** for independently identifying and eliminating underutilised cloud resources, delivering measurable cost savings.

Senior Analyst – Capgemini India Pvt Ltd

May 2017 – Mar 2019

Bangalore | *Client: Cisco*

- **Administered 24/7 L2/L3 Linux support** for Cisco's physical and virtual servers across 3 US data centers (ALLEN, RCDN, RTP), managing LVM provisioning, user access controls, and YUM/RPM package operations to sustain multi-region production availability.
- **Diagnosed and resolved** critical Linux system issues – user account lockouts, file system access, OS patching, and swap space – while enforcing **ITIL Change & Release Management** protocols to eliminate unauthorized production changes.
- **Received the Service Delivery Award** for driving operational excellence and service reliability.

Education

Bachelor of Technology in Information Technology, Anna University, India — May 2017

Certifications

-
- **AWS Solutions Architect Associate** (Certificate ID: 31679-91118-142989)
 - **Certified Kubernetes Administrator (CKA)** – Udemy
 - **Cloud Computing & DevOps** (Certificate ID: 31679-1523804-142989)

Languages

English (Professional) | **Tamil** (Native)
